```
HotSpot初始化阶段在src\share\vm\runtime\virtualspace.cpp的如下代码中生成ReservedSpace
C++代码 收藏代码
ReservedSpace::ReservedSpace(size_t size, size_t alignment,
                          bool large,
                          bool executable) {
 initialize(size, alignment, large, NULL, 0, executable);
这种方式生成的地址是随机的,导致加上如下三个参数时
Java代码 收藏代码
+PrintStubCode
+PrintAssembly
+PrintInterpreter
生成的汇编代码的地址也是随机的,不方便调试,
后来发现只要把前面的代码改成如下:
C++代码 收藏代码
ReservedSpace::ReservedSpace(size_t size, size_t alignment,
                          bool large,
                          bool executable) {
  //0x01cd0000是requested_address
  initialize(size, alignment, large, (char *)0x01cd0000, 0, executable);
这样生成的汇编代码的地址每次都一样了,
比如StubRoutines::call_stub的汇编代码固定如下:
Java代码 收藏代码
//...
;; loop:
0x01cd0425: mov
                 -0x4(%edx,%ecx,4),%eax
0x01cd0429: mov
                 %eax,(%esp,%ebx,4)
0x01cd042c: inc
                 %ebx
0x01cd042d: dec
                 %ecx
0x01cd042e: jne
                 0x01cd0425
;; parameters_done:
0x01cd0430: mov
                 0x14(%ebp),%ebx
                 0x18(%ebp),%eax
0x01cd0433: mov
0x01cd0436: mov
                 %esp,%esi
;; call Java function
0x01cd0438: call
                 *%eax
;; call_stub_return_address:
调试时,只要按地址打断点就能精确地到达你想要的那条汇编,
比如0x01cd0438对应的肯定是call
                            *%eax,从这里转到method entry point的汇编。
只不过有一点点缺陷, 我用的是windows,
发现没有正确释放requested_address 对应的空间,
导致不是每次重启HotSpot时都成功,多试几次又好了。
我甚至在ReservedSpace::initialize中加了如下代码:
Java代码 收藏代码
void initialize(size t size, size t alignment, bool large,
                char* requested_address,
                const size_t noaccess_prefix,
                bool executable) {
   if (requested address != 0) {
     unsigned int count = 10;
     while(count) {
       base = os::attempt_reserve_memory_at(size, requested_address);
       if (failed to reserve as requested(base, requested address, size, false)) {
         // OS ignored requested address. Try different address.
         base = NULL;
         os::release_memory(requested_address, size);
         count--;
       } else {
         break;
       }
     }
   } else {
     base = os::reserve_memory(size, NULL, alignment);
 //...
```
